OKI TARUNA RAMADHAN

Supply Chain Operation & IT Specialist

okitarunaramadhan@gmail.com 085797968246 Bandung, Indonesia

linkedin.com/in/otaruram

Professional Summary

Final year Information Systems student with extensive experience in architecting end to end Generative AI pipelines, Agentic workflows, and intelligent automation systems. Proven track record in deploying production ready AI solutions integrating fine-tuned NLP models, Multimodal RAG, and LLM orchestration (IndoBERT, Claude 3.5, Gemini, Azure AI Services). Strong foundation in Python, LLMOps, vector databases (pgvector), and cloud deployment, combined with 7+ years of operational systems optimization and a solid background as an AI Technical Mentor.

Professional Experience

AI & Technical Mentor, *Dicoding Indonesia* 05/2026 – 10/2026
Bandung

- Mentored 30+ developers and tech professionals under IBM SkillsBuild & DBS Foundation programs in Python backend logic, predictive analytics, and machine learning architecture.
- Conducted technical code reviews on model training workflows, API integrations, and cloud deployments.

Supply Chain Operations Administrator, 02/2019 – Present
PT DIRGANTARA INDONESIA (Indonesian Aerospace) Bandung, Indonesia

- Mapped and standardized end-to-end operational workflows, collaborating with cross-functional stakeholders to define business requirements (BRD) and functional specifications for internal inventory systems.
- Utilized SQL (DML commands: SELECT, INSERT, UPDATE) to validate operational database records, perform data reconciliations, and mitigate reporting errors by ~20%.
- Facilitated full-cycle software development implementation (SDLC), actively coordinating System Integration Testing (SIT) and supporting User Acceptance Testing (UAT) with operational end-users to ensure solution readiness.
- Analyzed material usage patterns and inventory turnover to support demand planning and operational efficiency.

Community Lead & Technical Contributor, *Fydemy* 01/2026 – 09/2026
Singapore

- Developed Python-based data automation scripts and mentored technical talents on workflow efficiency and API integrations.

Education

Bachelor of Science (S.1) in Information Systems (Last Year Student), 2023 – Present
Universitas Terbuka Bandung, Indonesia
Relevant Coursework: Systems Analysis & Design, Database Management Systems, Data Networks.

Machine Learning & Data Developer Learning Path (Online), *Dicoding Indonesia* Online Academy
Focus: Predictive Analytics, Data Processing (Python), & Applied System Architecture.

RELEVANT PROJECTS (PORTFOLIO)

Oziktag , *Supply Chain Visual QC & Digital Trust Platform*
- Designed an AI visual verification system integrating Multimodal RAG and Computer Vision to automate package damage inspection and eliminate transit dispute claims by up to 95%.
- Built an automated Agentic decision loop analyzing package condition snapshots in real time, generating contextual quality summaries, and triggering dynamic escrow releases via API integrations.
- Awarded Top 15 Finalist at BNI Spark Hackathon 2026 for innovative middleware architecture combining AI visual inspection and dynamic digital trust seals.

OtaruChain , *Multimodal Document Intelligence & Transparent Credit Scoring API*
- Engineered an automated financial document extraction pipeline using Gemini 2.5 Flash to extract receipt text and detect visual fraud anomalies (mark-ups, counterfeit claims) with real-time screening.
- Implemented an interpretable Adaptive Credit Scoring Engine powered by Logistic Regression and Human-in-the-Loop (HITL) validation, outputting auditable Trust Grades for liquidity risk mitigation.
- Architected a microservices backend featuring a Telegram Bot interface, privacy-preserving Phone Whitelist (UU PDP compliance), and tamper-evident data logging via Supa Ledger (PostgreSQL & SHA-256).
- Recognized as Finalist at BRIN AIDEANATION 2026 and Semifinalist at Bank Indonesia Innovation Competition.

OzikSustain , *AI-Powered ESG Compliance & Regulatory Assessment Engine*
- Architected a hybrid Generative AI assessment pipeline combining fine tuned IndoBERT embeddings and Claude 3.5 Sonnet for automated regulatory document mapping and multi-pillar ESG compliance scoring.
- Engineered an Agentic retrieval pipeline utilizing Supabase pgvector and semantic legal APIs (Pasal.id), achieving <24-hour delivery turnaround and reducing legacy audit costs by 85%.
- Implemented automated PII redaction and cryptographic HMAC-SHA256 audit logging to guarantee zero data leakage and prevent greenwashing across enterprise procurement workflows.

Technical Skills

AI & Machine Learning:
- Generative AI, Agentic AI, LLMOps, Retrieval-Augmented Generation (RAG), Fine-Tuned NLP (IndoBERT), Computer Vision, Multimodal Models, Prompt Engineering & Chaining, Prompt Flow.

Databases & Vector Stores:
- PostgreSQL, pgvector, Supabase, Prisma, SQL (Query Optimization & Validation)

Programming & Cloud:
- Python, Microsoft Azure (Azure OpenAI / Cognitive Services), Docker, RESTful APIs, Next.js, Go

Frameworks & Architecture:
- Human-in-the-Loop (HITL) Workflows, Cryptographic Integrity (HMAC-SHA256), SDLC (Agile), Microservices Architecture

HONORS & COMPETITIONS

Finalist, *BRIN Aidenation (OtaruChain Project) - OtaruChain Project (AI Document Intelligence & Risk Engine)*

Semifinalist, *Bank Indonesia Innovation Competition - OtaruChain Project (Multimodal Document Intelligence & Transparent Credit Scoring API)*

Top 15, *BNI Spark Hackathon 2026 (Oziktag Project) - Oziktag Project (Visual QC & Digital Supply Chain Platform)*

Top 11, *ZTE X ITB - OzikNTN Project (Cold-Chain Supply Chain Platform for 3T Regions)*

Semifinalist, *PLN SustainAction - OzikSustain Project (Smart Energy & Sustainability Management Platform)*
